

SonarWiz.SBP:

High Resolution Sub-bottom Profiling

SonarWiz.SBP is the best value for sub-bottom data acquisition. SonarWiz.SBP digitizes, records and displays sub-bottom profiler signals and integrates navigation inputs to produce high-quality georeferenced SEG-Y data. SonarWiz.SBP interfaces with most analog and digital sub-bottom profilers. SonarWiz.SBP includes support for thermal plotters for hardcopy output in real-time and playback.

SonarWiz.SBP:

Dependable, Precise
—Yet Simple to Use

Software Features...

- ➔ 64, 32 or 20 kHz sampling rate with 16-bit resolution 1 or 2 channels.
- ➔ Real-time seismic data display and playback with QC tools.
- ➔ Playback logic supports VCR style fast-forward, reverse, pause and stop options.

- ➔ Amplitude scope trace monitor.
- ➔ Spectrum display and band-cut filter.
- ➔ TVG and Stacking.
- ➔ Digital recording in 16-bit SEG-Y format.
- ➔ Compatible with any analog sub-bottom profiler.
- ➔ Flexible triggering options allowing either internal or external trigger source.
- ➔ Flexible internal or external event generation.
- ➔ Text annotation support stored in user-defined area of SEG-Y trace header for subsequent playback.
- ➔ Redundant data recording option.
- ➔ Contact marking.
- ➔ Color and contrast controls.
- ➔ Built-in deep water delay.
- ➔ Work in meters, feet or milliseconds. Local or UTC time.
- ➔ Multi-ping support for high resolution coverage in deep water.
- ➔ Compatible with most SEG-Y post processing systems and SonarWeb.
- ➔ Interfaces with Hypack, NMEA-0183 (RMC, GGA, GLL, VTG, HDT and VHW) and custom navigation interfaces.

- ➔ Support for EPC-1086, 980x, HSP-100, ODEC TDU-850, TDU-1200 and TDU-2000, Alden 9315 CTP, Isys 850e, Ultra 120, and Ultra 200 in real-time and playback.
- ➔ Laptop/PCMCIA configurations available.
- ➔ Full online HTML help system.
- ➔ Unmatched customer support.
- ➔ Yearly Maintenance Agreement available for extended upgrade and support options.
