FOR IMMEDIATE RELEASE

Chesapeake Technology Current Users Receive Complimentary SonarWiz 5 Upgrade

CTI announces a free upgrade to the newly introduced SonarWiz 5 to all customers with current Extended Maintenance Agreements (EMA). "We greatly value our customers and want them all to benefit from this major upgrade to our SonarWiz product" said Eileen Gann, President of CTI. We encourage all of our customers to use the advanced processing tools now available in SonarWiz 5.

SonarWiz 5's new "ribbon" user interface is designed to allow new users to quickly get up to speed by categorizing tools into logical panels with clearly labeled tool tip help. But SonarWiz 5 adds a lot more than lipstick. With 8 new mosaic export options including GeoJPG, JPEG2000 and ECW, customers are no longer limited to the bounds of the GeoTIFF file format. Plus our new target reports are faster and backed by the power of a relational database so you can select just the contact set you want quickly using standard query language. These are just a few features reflecting Chesapeake Technology's commitment to the evolving needs of our customers.

For customers who do not have a current EMA, please feel free to contact us via phone or e-mail for pricing. Not only will this update benefit you with the newest feature downloads, but also includes 24/7 priority customer support and a 15% discount on upcoming workshops.

From its location in Mountain View, California, Chesapeake Technology, Inc. (CTI) has been offering custom software and hardware solutions to the marine geophysical and geological survey industry for over 20 years. Through its developments in marine surveying technology, CTI has been a chosen consultant for leaders throughout the marine product industry.
